

Ms Aduaka says...

- Make sure you know which topics you need to revise for each subject. Use your exam board specifications as a revision list.
- Identify which GCSE subjects you need to prioritise to get better marks. Create a revision timetable.
- Use revision guides and websites
- Create revision cards in postcard sizes (the cards, could be in different colours just to spice it up), mind maps or use post it notes
- PRACTICE, PRACTICE, PRACTICE - Do lots of practise papers. Test yourself by completing past papers or asking a friend to test you. This will identify areas of strength and weakness.

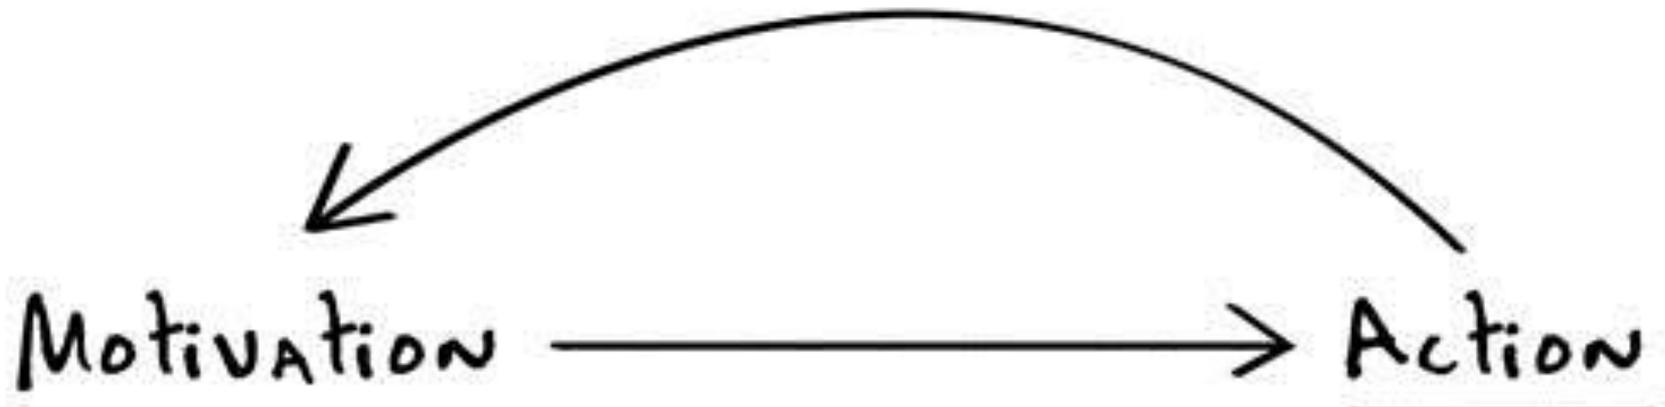

**Mr Abbott
asks...**

**Have you tried recording
your revision notes on
your phone or as an mp3
& listen to them back?**

Ms Karpinska says watch this...

<https://www.youtube.com/watch?v=PRtYNGGB9nsM>

"If you INCREASE your ACTION,
your motivation will INCREASE"

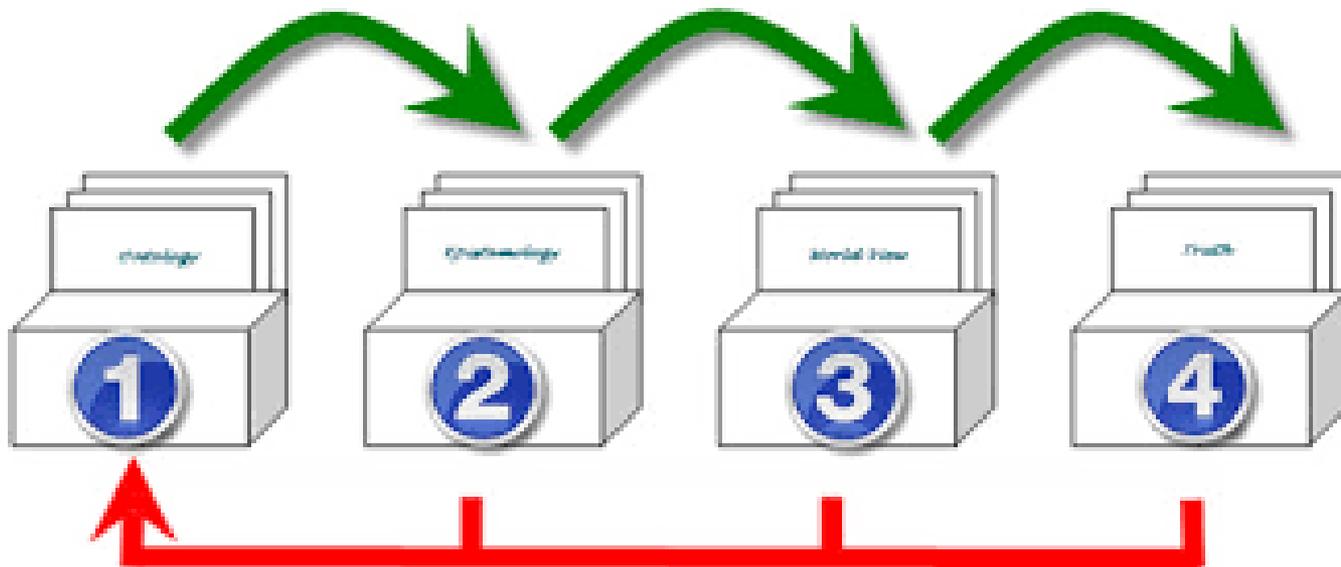

Test yourself with flashcards: The Leitner method

Miss Tobia recommends:

- Get 3 envelopes/boxes labelled 'everyday' 'Tues/Thurs' and 'Friday'
- Start with all flashcards in the everyday box. As you test yourself and get the answers correct, move them down to the next day's box. Any incorrect answers have to stay in the everyday box.
- Keep doing this, until by Friday you have a list of secure knowledge you need to check less frequently and an everyday box of topics you need to work more on.

Mrs Close says:

Stick revision notes all around your room/house

Ms Gite believes in Spacing or Inter-levelling **DO NOT CRAM!**

A widely-held belief/myth: Students can cram a variety of subjects for numerous exams and still perform at their best, achieving their potential.

The Research Evidence: “Spacing” learning leads to better and longer retention of information than “massing” or “cramming” models.

MS ARGYRAKIS SAYS:

STARTING point for revision

- Make some small revision cards

THEN create a short list of the key features FROM EACH Area of Study and learn off by heart.

another USEFUL tip - research suggests if we

Repeat SOMETHING 3 times we are more likely to remember it.

Repeat SOMETHING 3 times we are more likely to remember it.

Repeat SOMETHING 3 times we are more likely to remember it.
